Art Unit: 3683

DETAILED ACTION

1) The finality of the application has been withdrawn due to the appeal conference held on February 1, 2006 and the search performed on the same day.

Claim Rejections - 35 USC § 103

- 2) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3) Claims 1, 3-8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koga et al (5839800) in view of Gerstenmaier et al (JP 6-144153).

In re claims 1 and 10, Koga et al teaches a brake controller (5) for determining a desired rate of deceleration (9) from sensor outputs (15); a regenerative braking system (4) commanded by the brake controller to produce a braking torque corresponding to the desired rate of deceleration (col. 6 lines 48-55); a primary speed sensing system (15) for determining speed and deceleration of the vehicle, a deceleration sensor (15), a brake monitor (9) for receiving the sensor inputs from the operator and for determining an audit range of deceleration; a friction braking system (24) operational as claimed.

Please note that in column 6 lines 57-64, Koga et al cites that a combination of a speed sensor and pendulum sensor can be used to find the actual deceleration, but lacks the specific teaching of comparing the two values to a target deceleration or redundancy.

Please note that method in claim 10 is inherent to the design of Koga et al.

Application/Control Number: 10/708,854

Art Unit: 3683

Gerstenmaier et al teaches redundancy in sensors in vehicle brake systems.

Gerstenmaier teaches both a deceleration sensor and a speed sensor.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided Koga et al with redundancy in the sensing of the decleration as taught by Gerstenmaier to improve the vehicle safetly and ensure operation of the brakes.

In re claims 3-4, see col. 6 lines 57-64.

In re claim 5-6, it would be obvious to make the speed sensor or the pendulum sensor, the primary speed sensing system merely because they are functional equivalent of sensing deceleration and it would be a matter of design to which a person of ordinary skill in the art would desire as the primary sensor.

IN re claims 7-8, see element 11, 24 and please note that the accelerator pedal sensor is cited in Koga et al by operation of the motor. (Col. 5 lines 11-22)

4) Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Koga et al (5839800) in view of Gerstenmaier et al (JP 6-144153) and further in view of Byrne et al (4094555).

In re claim 2, Koga et al as modified by Gerstenmaier et al lacks the teaching of comparing the output of the deceleration sensor with a lower and upper deceleration target.

Byrne et al teaches comparing the output of a decelerometer with an upper and lower deceleration target value.

Application/Control Number: 10/708,854

Art Unit: 3683

It would have been obvious to one of ordinary skill in the art at the time of the invention to have compared the deceleration sensor of Koga et al as modified by Gerstenmaier et al with an upper and lower target value in order to maintain control of the vehicle and increase stability.

Claims 9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koga et al (5839800) in view of Gerstenmaier et al (JP 6-144153) and further in view of Crombez et al (6655754).

In re claims 9 and 11, Koga et al as modified by Gerstenmaier et al lacks the teaching of a warning mechanism for a driver.

Crombez et al teaches the use of a warning indicator for a driver.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided the brake system of Koga et al as modified by Gerstenmaier et al with a warning indicator as taught by Crombez et al in order to provide the driver with an indication that a failure may have occurred in the brake system insuring reliable operation of the brakes.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Devon C. Kramer whose telephone number is 571-272-7118. The examiner can normally be reached on Mon-Fri 8-4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James McClellan can be reached on (571)272-6786. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
